

This product provides an interactive way for people with visual impairments to learn to recognize a variety of shapes in a convenient manner. This product is oriented towards young students who are learning important skills such as recognizing letters and shapes but need the assistance of a helper to do so. To many parents, the independence of their children is important, especially when circumstances arise that make that independence diminish. It's crucial to allow kids to develop important skills on their own, as to facilitate greater independence as an adult despite the challenges they may face. This device teaches children with visual impairments to recognize letters and shapes without the assistance of a helper, thereby facilitating independent learning.
